## Assay

### Principle

The assay is based on the increase in absorbance at 500 nm as the formation of quinoneimine dye proceeds in the following reactions:

### Unit definition

One unit is defined as the amount of enzyme which generates 1 μmole of H<sub>2</sub>O<sub>2</sub> per minute at 37°C under the conditions specified in the assay procedure.

### Reagents

#### 1. Reaction mixture

1.211 g of Tris (hydroxymethyl) amino methane, 2.1 g of choline chloride and 2 ml of 1 % (W/V) phenol are dissolved with 1 N HCl and adjusted to pH 8.0 (25°C). Then, 1 ml of 1 % (W/V) 4-AA and 3 ml of 100 PPU/ml POD are added to make a total of 100 ml.

#### 2. Enzyme dilution buffer

10 mM Tris-HCl buffer (pH 8.0) containing 2 mM EDTA and 1 % (W/V) KCl

EDTA: Ethylenediaminetetraacetic acid

#### 3. Reagents

Choline chloride:

4-AA: NACALAI TESQUE, INC. Special grade #01907-52

POD: Sigma Chemical Co. Type II #P-8250

EDTA (2 Na·2H<sub>2</sub>O) : KISHIDA CHEMICAL Co., Ltd.

#060-29133

## ■ Enzyme solution

Accurately weigh about 20 mg of the sample and add enzyme dilution buffer to make a total of 20 ml. Dilute it with enzyme dilution buffer to adjust the concentration as required.

## ■ Procedure

- Pipette accurately 3.0 ml of reaction mixture into a small test tube and preincubate it at 37°C.
- After 5 min, add 50  $\mu$ l of enzyme solution and mix to start the reaction at 37°C.
- After starting the reaction, measure the rate of increase per minutes in absorbance at 500 nm from 2 min to 7 min.

$$\Delta A/min \leq 0.040 \text{ Abs/min}$$

## ■ Calculation

$$\text{Activity (U/mg of powder)} = \frac{\Delta A/min}{12.0 \times 1/2} \times \frac{3.05}{0.05} \times \frac{1}{X}$$

12.0 : millimolar extinction coefficient of quinoneimine dye at 500 nm ( $\text{cm}^2/\mu\text{mole}$ )

1/2 : multiplier derived from the fact that 2 mole of  $\text{H}_2\text{O}_2$  produce 1 mole of quinoneimine dye.

3.05 : final volume (ml)

0.05 : volume of enzyme solution (ml)

X : concentration of the sample in enzyme solution

(mg/ml)

## Storage

Storage at -20°C in the presence of a desiccant is recommended. Enzyme activity will be retained for at least one year under this condition.
