Assay

■ Principle

The assay is based on the decrease in absorbance at 600 nm as the reduction of 2,6-dichloroindophenol in the following reactions:

PMS : Phenazine methosulfate

DCIP : 2,6-Dichloroindophenol

■ Unit definition

One unit is defined as the amount of enzyme which converts 1 μmole of D-Glucose to D-Glucono-1,5-lactone per minute at 37 °C under the conditions specified in the assay procedure.

■ Reagents

1. Reaction mixture

0.1 M Na₂HPO₄-Na₂HPO₄ buffer pH 6.5 containing 0.222 M D-Glucose and 0.0833% Triton X-100

2. 20 mM PMS solution

3. 2.0 mM DCIP solution

4. Enzyme dilution buffer

50 mM Na₂HPO₄-Na₂HPO₄ buffer pH 6.5 containing 0.1 % BSA and 0.1 % Triton X-100

5. Reagents

Triton X-100 : The Dow Chemical Company

BSA : Millipore Fraction V pH5.2 #81053

D-Glucose : FUJIFILM Wako Pure Chemical Corporation
049-31165

PMS (Phenazine methosulfate) :

Tokyo Chemical Industry # P0083

DCIP (2,6-Dichloroindophenol) : Sigma-Aldrich

119814

■ Enzyme solution

Accurately weigh about 10 mg of the sample and add enzyme dilution buffer to make a total of 20 ml. Dilute it with enzyme dilution buffer to adjust the concentration as required.

■ Procedure

- Pipette accurately 1.8 ml of reaction mixture and 20 μl of enzyme solution into a small test tube. Add 100 μl of 20 mM PMS solution, mix and preincubate at 37 °C.

* In the case of a blank test, add 20 μl of enzyme dilution buffer at this time.

2. After 3 min, add 100 μ l of 2.0 mM DCIP solution and mix to start the reaction at 37 °C.
3. After starting the reaction, measure the rate of increase per minute in absorbance at 600 nm. The rate must be measured within the linear portion of the absorbance curve.

Absorbance sample : As/min
blank : Ab/min
 $\Delta A/\text{min} = (\text{As}/\text{min} - \text{Ab}/\text{min}) \leq 0.1 \text{Abs}/\text{min}$

■ Calculation

$$\text{Activity (U/mg of powder)} = \frac{\Delta A/\text{min}}{16.3} \times \frac{2.02}{0.02} \times \frac{1}{X}$$

16.3 : millimolar extinction coefficient of DCIP at 600 nm ($\text{cm}^2/\mu\text{mole}$)
2.02 : final volume (ml)
0.02 : volume of enzyme solution (ml)
X : concentration of the sample in enzyme solution (mg/ml)

Storage

Storage at -20 °C in the presence of a desiccant is recommended.
