Assay

■ Principle

The assay is based on the increase in absorbance at 565 nm as the formation of quinoneimine dye proceeds in the following reactions:

■ Unit definition

One unit is defined as the amount of enzyme which generates 1 μ mole of H₂O₂ per minute at 37°C under the conditions specified in the assay procedure.

■ Reagents

1. Reaction mixture

0.2 M KH ₂ PO ₄ -NaOH buffer pH 6.5	0.2 ml
50 U/ml POD solution ¹⁾	0.1 ml
15 mM 4-AA solution	0.1 ml
0.5 M DL-Lactic acid solution pH 6.5	0.1 ml
Distilled water	0.3 ml

Mix above reagents in advance. Just before measuring, add the reagent listed below and mix.

0.2% (W/V) DMA solution	0.2 ml
-------------------------	--------

1): 50 U/ml POD solution

Dissolve 500 U (PPU) of POD with 10 ml of distilled water.

2. Reaction stopper

0.25% (W/V) LBS solution

LBS: Sodium lauryl sulfate

3. Enzyme dilution buffer

10 mM KH₂PO₄-NaOH buffer pH 7.0 containing

10 μ M FAD

FAD: Flavine adenine dinucleotide

4. Reagents

DL-Lactic acid:

FUJIFILM Wako Pure Chemical Corporation

Special grade #128-00056

DMA: FUJIFILM Wako Pure Chemical Corporation

Special grade #044-02763

FAD (2Na): Kyowa Hakko Co., Ltd.

LBS: NACALAI TESQUE, INC. Extra pure #20123-22

4-AA: NACALAI TESQUE, INC.

Special grade #01907-52

POD: Sigma Chemical Co. Type II #P-8250

■ Enzyme solution

Accurately weigh about 20 mg of the sample and add enzyme dilution buffer to make a total of 20 ml. Dilute it with enzyme solution buffer to adjust the concentration as required.

■ Procedure

- Pipette accurately 1.0 ml of reaction mixture into a small test tube and preincubate at 37°C.
- After 5 min, add exactly 20 μ l of enzyme solution and mix to start the reaction at 37°C.
※ In the case of a test blank, add 20 μ l of enzyme dilution buffer in place of enzyme solution.
- At 10 min after starting the reaction, add 2.0 ml of the reaction stopper to stop the reaction.
- Measure the absorbance at 565 nm.

$$\text{Absorbance}_{\text{sample}} : \text{As}$$

$$\text{blank} : \text{Ab}$$

$$\Delta A = (\text{As} - \text{Ab}) \leq 0.350 \text{ Abs}$$

■ Calculation

$$\text{Activity (U/mg of powder)} = \frac{\Delta A/10}{35.33 \times 1/2} \times \frac{3.02}{0.02} \times \frac{1}{X}$$

35.33 : millimolar extinction coefficient of quinoneimine dye at 565 nm ($\text{cm}^2/\mu\text{mole}$)

1/2 : a multiplier derived from the fact that 2 mole of

H_2O_2 produces 1 mole of quinoneimine dye
 10 : reaction time (min)
 3.02 : final volume (ml)
 0.02 : volume of enzyme solution (ml)
 X : concentration of the sample in enzyme solution
(mg/ml)

Storage

Storage at -20°C in the presence of a desiccant is recommended. The enzyme activity will be retained for at least one year under this condition (Figure 4).
