

Enables top sealing with single layer structure

AK Peel coat

[Base material]

PET,OPP,NYLON, etc. can be selected according to application

Direct coating with

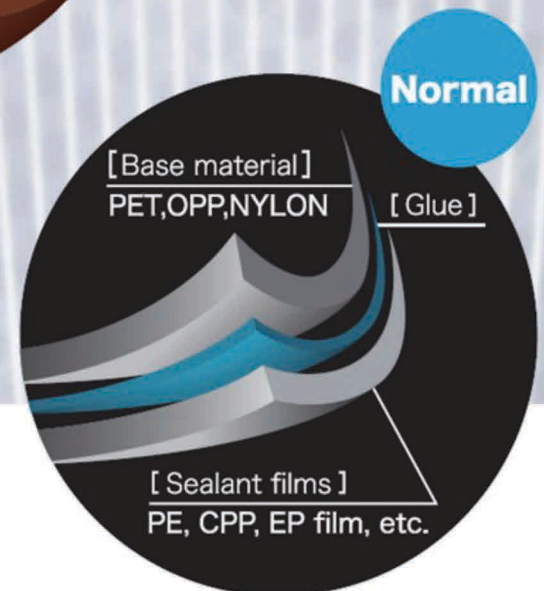

AK Peel coat

As an alternative to sealant film, the Peel agent is coated with our proprietary coating technology.

Stable sealing strength and smooth peeling action.

Top Film Environmental Solutions

- Mono-materialization by reducing sealant film
- No lamination process required, no adhesive
- Film material and thickness can be selected according to conditions.
- Printing content (design) is not affected.
- Various container materials such as PP, PS, PE, etc. are available for sealing.
- Based on "Specifications and Standards for Foods, Additives, etc. (Ministry of Health and Welfare Notification No. 370) Analysis test report obtained
- Use of food PL (Positive List) compliant products

General top films are composed of two or more layers of laminate to provide sealing properties.
